Michael Sangild [Farm biogas] - DK

Previously NISSEN energy replaced the existing Jenbacher 208 gas engine with a new MAN E2842LE322 gas engine unit on this farm biogas plant in Røddekro.

In addition to the design, drawing, delivery and commissioning of the engine-unit, the project included an expansion of the plant's heating system and also delivery and start-up of a burner-installation.

Subsequently, Farmer Michael Sangild, in addition to this plant, chose another engine solution from NISSEN energy, this time a gas engine plant based on MAN type 3262LE212 built-in container.

NISSEN energy carry out maintenance on all equipment supplied.
