Skals Kraftvarmeværk [District Heating] - DK

NISSEN energy's co-operation with Skals Kraftvarmeværk goes far back. We have now replaced earlier delivered equipment, so the plant will be kept up to date.

NISSEN energy has been responsible for replacing control panels on the plant's Zantingh RKB 600 gas burner. The older Landis + Gyr control was replaced with a new Autoflame MK7 control.

Recently, the plant's existing Zantingh 4.0 ND-DKR burner was replaced with a new model for operation on both bio and natural gas.

NISSEN energy performs service and maintenance on the equipment of the plant.
